

Ideal Craft TestSets

DSL Ready Craft Test Sets

The introduction of DSL (Digital Subscriber Line) technology over existing POTS (Plain Old Telephone Service) poses significant challenges for technicians when installing and testing analog voice circuits. The digital data piece of a DSL circuit will not tolerate the electrical off-hook connection of a conventional craft test set (butt set), and can result in corrupt data or collapse of the digital circuit.

Test Sets Designed To Meet Craft Standards

All IDEAL test sets are made from fiberglass-reinforced ABS to withstand rugged use. The moisture-resistant case ensures reliable performance under the most demanding weather conditions. A high impedance monitor feature (above 120 K Ω) helps prevent accidental interruption of data flow if accidentally connected to a digital/data circuit. The low-profile design is lightweight, easy to carry and fits comfortably on the shoulder. The recessed keypad helps prevent keypad damage and minimize accidental button contact.
